

## FEATURES

Provides high-performance methionine, an essential amino acid, in an easy-to-digest form

Utilizes advanced, all-natural protective coating for maximum bypass and amino acid absorption

High rumen bypass levels and highly digestible methionine can reduce overall nitrogen output

Small particle size

University and field tested

Global technical support

Produced under supervision of industry leading quality control team

## BENEFITS

- Increases milk volume and improves quality and volume of milk components
- Helps improve health, performance and immune function in dairy cattle
- Maximizes profitability per animal for improved ROI and ROE (return on equity)

- Delivers 93% intestinally digestible supply of methionine for quick and efficient absorption into the bloodstream
- Provides high bioavailability levels, delivering a full 34 grams of methionine for every 100 grams of product fed

Helps keep operation compliant with regulatory agencies and promotes environmentally friendly land stewardship

- Highly nutrient-dense particle delivers more methionine per gram than competitors and helps reduce ration/feed cost
- Mixes easily
- Smaller size aids in absorption

Performance is verified by independent third parties, assuring performance in both clinical environments and in the field

Provides assurance of performance and peace of mind, knowing help is just a phone call away

Guarantees product consistency, performance and animal safety
